

CLAIMS

1. A stapler, comprising:

a clincher unit having a clincher for clinching legs of a staple
5 driven out by a driver and a holder which holds the clincher,

said holder being formed with guide surfaces which are slanted
for guiding tips of the legs of said staple toward the clincher,
characterized in that

said holder is movable with respect to the clincher unit.

10

2. The stapler according to claim 1, further comprising a driver unit
having said driver, characterized in that the driver unit and said
clincher unit are vertically separated from each other.

15 3. The stapler according to claim 1 or 2, characterized in that said
clincher has a pair of clincher members disposed rotatable relative to
said holder and in such a manner that positions of their rotating surface
are deviated from each other, and a partition plate is disposed between
the clincher members.

20

4. The stapler according to any one of claims 1 to 3, characterized in
that said clincher unit has a clincher unit box of which a side opposing
the driver is opened, and said holder is disposed movable in the clincher
unit box, and biasing members are disposed between an one-side wall of
25 the holder and an one-side wall of the clincher unit box opposing the
one-side wall of the holder and between an another-wall of the holder
and an another-wall of the clincher unit box opposing the another-wall of

the holder to bias said holder in directions pressing toward each other.

5. The stapler according to claim 4, characterized in that said biasing members are wave springs.
